

BCRP Medical Department (Doctor Job) Design Notes

Goal

Create a dedicated **Doctor** role for Broken Compass RP that can treat and revive patients without being considered EMS/ambulance personnel.

The objective is to keep doctors hospital-based while allowing firefighters and EMS to remain separate roles.

Current Medical Stack

Core Medical System

Resource:

```
qbx_medical
```

Provides health, death, last stand, revive, and healing functionality.

Confirmed exports available:

```
exports.qbx_medical:Revive(targetId)  
exports.qbx_medical:Heal(targetId)
```

These exports can be called from custom resources.

EMS Gameplay Layer

Resource:

```
randol_medical
```

Provides:

- EMS interactions
- Medical items
- Ambulance workflows
- EMS-targeted actions

Not intended to be modified heavily.

Randol Medical Findings

Available Item Exports

Bandage:

```
randol_medical.bandage
```

First Aid Kit:

```
randol_medical.firstaid
```

Medical Bag:

```
randol_medical.medicalbag
```

Adrenaline:

```
randol_medical.adrenaline
```

Job Restrictions

Medical bag usage is restricted by:

```
Config.AmbulanceJobNames
```

Current configuration:

```
AmbulanceJobNames = {  
    ambulance = true,  
}
```

Important Design Decision

DO NOT add:

```
doctor = true
```

to:

```
Config.AmbulanceJobNames
```

Reason:

That table controls more than item access.

It may affect:

- EMS player counts
- EMS availability checks
- Dispatch behavior
- F6 menus
- EMS target interactions
- AI medic restrictions
- Ambulance-related gameplay

Adding doctors there would effectively make them EMS.

Recommended Architecture

```
[qbx]  
└─ qbx_medical  
  
[randol]  
└─ randol_medical
```

```
[srp]
└─ bcrp-md
```

Where:

```
bcrp-md
```

becomes the doctor-specific resource.

Doctor Job Design

Job name:

```
doctor
```

Suggested grades:

```
0 Intern
1 Resident
2 Physician
3 Surgeon
4 Chief of Medicine
```

Boss grade:

```
isboss = true
```

on Chief of Medicine.

qbx_management Integration

Not Required For

- Healing
- Reviving
- Duty checks
- Stashes
- Target interactions

- Doctor tools

A doctor job can function without qbx_management.

Recommended For

Use qbx_management only for:

- Hiring
- Firing
- Promotions
- Employee management
- Payroll
- Boss menu

This gives doctors a standard Qbox job structure.

Planned bcrp-md Features

Treatment Actions

Doctor-only target options:

```
Heal Patient  
Revive Patient  
Check Vitals
```

Examples:

```
exports.qbx_medical:Heal(targetId)
```

```
exports.qbx_medical:Revive(targetId)
```

Hospital Facilities

Doctor locker:

Medical Locker

Storage:

Medical Supply Storage

Hospital duty station:

Clock In
Clock Out

Patient Services

Potential future additions:

Patient Check-In
Medical Reports
Prescriptions
Doctor Notes
Hospital Billing

Renewed-Banking Integration Ideas

Doctors could bill patients directly.

Examples:

Emergency Treatment
Physical Exam
Prescription Fee
Surgery Fee

Billing can be handled through Renewed-Banking exports/events.

Fire Department Considerations

Current firefighter implementation appears largely cosmetic.

The reviewed medical resource does NOT appear to contain:

- Fire spawning
- Fire suppression
- Fire propagation

Those systems are likely located in separate resources.

Because of this:

- Firefighters can remain firefighters.
- Doctors can remain hospital staff.
- EMS can remain ambulance responders.

All three roles can coexist without sharing the same job.

Long-Term Vision

Emergency ecosystem:

Firefighter

- ├ Fire suppression
- ├ Rescue operations
- └ Scene safety

EMS

- ├ Ambulance transport
- ├ Field treatment
- └ Emergency response

Doctor

- ├ Hospital treatment
- ├ Revives
- ├ Medical records
- ├ Prescriptions
- └ Patient care

This keeps roleplay expectations clear:

- Firefighters arrive in fire apparatus.
- EMS arrive in ambulances.
- Doctors stay at the hospital.

Players seeing a red cross or EMS icon will not incorrectly expect an ambulance to arrive.
